

SOLAR IS A GOOD NEIGHBOR!

50+ Years of Safe, Passive Electricity Generation

Unsure about the implications of having a solar farm in your community? Consider the following points.

Solar will:

Guarantee **safe**, **quiet**, and **clean** operations. Modern panels are constructed with recyclable materials and no toxins.

Create **less impact** on county resources than most other real estate development. Solar is one of the only types of economic development where the land can easily be returned to its previous use.

Create **jobs** in construction and operations, while increasing local business **sales** and county **revenue**.

Use existing or planted vegetation to provide **attractive visual buffers** and can be designed and engineered to **preserve** the landscape's character and preserve and **improve** waterways and natural habitats.

Produce **zero emissions** and **no contamination** of air, water or soil.

Once operational, produce **little traffic** and **no audible sound** past the fence line.
