

CONSIDERING SOLAR

Innovation in technology has made it possible for solar projects to provide energy customers with cost-competitive electricity and long-term price assurance. As demand for this resource has increased, SolUnesco and other solar developers have turned to land parcels like yours as potential hosts for solar sites. Owners find selling or leasing their land for solar development to be attractive for many reasons, including:

- Upfront revenue for you before the land is even used.
- Long-term lease revenue that greatly exceeds other uses of rural land.
- A sales price that greatly exceeds the value of the land.
- Professional maintenance of the land and vegetation for the life of the project Guarantees that, at the end of the project's end operating life, your land will be responsibly restored as a well-preserved meadow.
- Solar is a quiet neighbor with no emissions or byproducts.
- Projects can be visually screened with vegetation or natural landscape.
- Benefits to the local workforce, suppliers, and other retailers.
- Economic growth for your local community including increased tax revenue.

Preserving Land for Future Generations

HOW IT WORKS

Option to Purchase or Lease

We start by entering an Option to Purchase or an Option to Lease, depending on your preference, which provides a period for SolUnesco to ensure the feasibility of the project prior to executing the option and beginning construction.

Option Period

During the option period, SolUnesco will pay you an annual option payment while we complete the development work needed to determine whether the property can support a viable solar project. These payments are yours to keep, even if the project is ultimately not built. During the option period, there is no financial risk to you and little, if any, impact on the land. During development, you may continue to use your property as you have historically done.

Execution of Purchase or Lease

Once the project is ready for construction, we will provide you notice of our intention to move to the construction phase and pay the purchase or lease price agreed to in the option prior to any construction activities.

WHY WORK WITH SOLUNESCO?

SolUnesco is a talented, nimble team that has accomplished big things in the solar market. Our smaller size allows us to focus with great attention on individual projects, as opposed to trying to oversee and manage a vast portfolio. And we have found success through dedication to our five core principles:

Trust, Passion, Creativity, Community and Expertise

We have decades of experience, with company highlights and milestones that demonstrate a deep knowledge of market conditions, the agility and resources to make strategic and early moves, capacity and expertise in developing and monetizing projects, and our creative and committed approaches to overcoming roadblocks. Most importantly, we set ourselves apart by prioritizing trusted relationships with our landowners and broader communities through extensive physical on-the-ground presence. SolUnesco puts in the effort to consider the needs of our stakeholders and do what is best for all involved.

DEVELOPMENT TEAM

In addition to SolUnesco's corporate support teams, developers you'll meet in the field include:

Francis Hodsoil

Janell Cloud

Clay Harrison

ABOUT SOLUNESCO

SolUnesco develops clean, renewable energy projects and also spearheads state and local policy development. We strive to connect rural landowners with new revenue opportunities through sustainable, cost competitive energy generation. We work with the community to ensure responsible development from early planning until the project is brought online.
